V.HARIKRISHNAN

# INTRODUCTION

- ▶ Pollution means the introduction of harmful substance into the environment - air, water or land which cause adverse effect on living organisms and ecosystem.
- ▶ It is one of the biggest global challenges caused mainly by industrialization

# TYPES OF POLLUTION

## ► AIR POLLUTION

### SOURCE:

- 1)Industrial emission
- 2)vehicle exhaust
- 3)Buring of fossil fuels

### EFFECT:

depletion

Respiratory problems,acid rain,global warming,ozone layer

# WATER POLLUTION

## ► SOURCE:

- 1)Industrial wastewater discharge
- 2)sewage and domestic waste
- 3)oil spills and agricultural runoff

## ► EFFECT:

Death of aquatic life,waterbone disease,and loss of biodiversity

# SOIL POLLUTION

## ► SOURCE:

- 1) Improper disposal of industrial waste
- 2) pesticides and chemical fertilizers
- 3) Leaching from landfills

## ► EFFECT:

Loss of soil fertility, contaminated crops, ecosystem damage

# CONCLUSION

Pollution is a serious threat to the planet's health, but it can be controlled with scientific industrial, and individual efforts.

THANK YOU
